General Information about the Training and the Location	page 09

No matter if you are working with a Flottweg machine for the first time or if you want to deepen your practical knowledge: The Flottweg Academy in Vilsbiburg offers various training units so that you will work even more efficiently and thus more successfully in the future.

We take care to have small groups (no more than five participants) for our training units so that every participant gets fully involved and looked after.

It is our goal to train you with theoretical knowledge and practical skills for the smooth operation of our centrifuges in your daily work.
