

# SUCCESS IS WHEN YOU ARE SAFE AND SECURE.

## Machines and plants on the cutting edge of technology.

The Product Safety and Occupational Health and Safety Act in Germany and the Use of Work Equipment Directive in the EU encourages this.

**(Existing) machines and plants must conform to the latest technological standards.**

Flottweg continually develops centrifuge technology and the safety technology associated with it in compliance with standards. In doing so, we look at the progress made in all relevant areas in terms of science and technology, such as explosion protection, hygiene requirements, and much more. This allows us to guarantee optimum level of safety for people and products.

As your partner, we use this know-how to help you to test and evaluate your existing machines in a targeted manner and, upon request, to update them. Our service includes, but is not limited to:

- **Technical upgrades according to DIN EN ISO 14120**
- **Implementation of functional safety, where necessary**
- **Conversion of the inertization unit to the latest standard**
- **etc.**

**You can thus ensure that your (safety) technology is up-to-date and your machines are productive at the same time.**

Our experienced staff usually carry out the analysis, and optional implementation, on site.

**Feel free to contact us. We'd be happy to help.**
